ENVIROTROL AWARDED \$700K BIPOLAR IONIZATION CONTRACT WITH CMS

CHARLOTTE, NC. – Charlotte-Mecklenburg Schools (CMS) has awarded a \$713,768.31 contract to Envirotrol to install Needlepoint Bipolar Ionization (NPBI) units at 46 schools. Since Envirotrol's partnership with CMS began in 2021, indoor air quality has become a priority for the school system.

Envirotrol has over 30 years of industry experience, providing building automation and controls, HVAC service, and sales solutions across the Southeast. This depth of knowledge will be beneficial as Envirotrol works to improve indoor air quality in schools and administrative buildings across CMS. After the completion of this project, Envirotrol will have installed over 10,000 NPBI units in over 100 sites.

NPBI units have increased in popularity with the rise of the COVID-19 pandemic and are becoming prevalent in many commercial environments. These units remove harmful and health-threatening bacteria and viruses to improve indoor air quality in large-scale buildings. NPBI is an affordable solution that increases overall efficiency and energy savings.
